

Project Designer I (MALIBU)

We are seeking a Project Designer I, with previous experience, to be involved with all aspects and phases of the design and production of custom modern residential, civic, and commercial design projects. Come help us rebuild our community!

About YOU: You are a recent graduate or have two or three (or five?) years of practical experience, and are passionate about doing good work. You are anxious to learn all aspects of being an architect, and you are not afraid to research and ask questions. You want to be a part of a small office where we all have a voice and we all can learn from one-another.

About US: We are a small firm, doing residential, civic, and commercial projects here in Southern California and the Puget Sound. We operate as generalists and, as we cautiously grow, we are looking for someone who shares in our interest in all aspects of a project's realization to create work that inspires us.

Software: We are a Mac/ BIM-based office. We use Archicad with Artlantis and BIM-X, although we have found that Revit experience makes for a relatively comparable background and transition. Of course, we also use Adobe Creative Suite products, and MS Office. We also use a Makerbot 3D printer.

Salary Range: Hourly / D.O.E. + Health Benefits

Contact Information: Please email resume and a pdf (6 Mb max) with examples of your work or a link to jeremy@studiobacket.com (please no phone calls). Of particular interest are examples of construction documents, design, and rendering skills. Thank you!
