

### **Senior Technical Architect**

Pfeiffer, a Perkins Eastman Studio is currently seeking a senior architect to support our continued growth. As a distinct studio within Perkins Eastman, we are a design-focused practice of architects, interior designers, and planners. We work nationally and internationally with an emphasis on cultural and arts facilities, libraries, and educational buildings, as well as renovation/preservation and adaptive reuse projects for public and private clients.

The Senior Technical Architect will develop and follow through on projects from pre-design through construction administration phases. The candidate should have both strong technical and design capabilities and the ability to collaborate with senior staff openly and effectively and to direct/mentor intermediate and junior staff.

- Candidates should have the following qualifications:
- 15 or more years of relevant experience
- Registered architect, LEED AP preferred, DBIA desirable
- Familiarity with both owner/architect and architect/consultant forms of agreement; design/build experience desirable
- Clear understanding of risk mitigation through technical acumen and effective construction phase management
- Thorough understanding of project delivery processes, including design/build
- Proficiency with BIM360, Revit, AutoCAD and other applicable software applications
- Ability to work effectively with Principals and project design leaders in a collaborative environment
- Ability to effectively represent the firm to its clients and the community
- An effective communicator, experienced in making presentations to clients and public agencies.

### **Position responsibilities**

- Leading the detailing and documentation process from concepts through CA for multi-phased, complex performing arts, library, and education and historic renovation projects
- Documenting new construction, as well as renovations and additions
- Preparing building construction drawings and details that are aligned with construction budgets
- Editing and coordinating specifications
- Researching and the innovative application of materials and building systems
- Serving as a technical resource to developing architects for details, consultant communication and constructability
