I recently relocated to West Hollywood from South Florida and graduated with a Bachelors in Architecture. I am expressing my interest in entry level positions in Los Angeles and ambitious to start a career in California. I am a driven person willing to put in the extra 20% needed for the team. I am passionate about design methods and practices and possess a solid educational background from Florida Atlantic University. It would be a privilege for me to contribute my skills and experience of project leading in my educational career.

Throughout my journey and professional endeavors I have developed an understanding of architectural principles and an acute attention to detail. My B.A. in Architecture from Florida Atlantic University has provided me with a foundation in design theory, construction techniques and sustainable practices.

My proficiency in utilizing software such, as AutoCAD, Revit, Rhino 3D and Adobe Creative Suite empowers me to effectively transform ideas into precise and captivating visual representations. I enjoy taking on the challenge and teaching myself new programs that are trending in the architecture community and new creative ways to express those ideas.

I have an ability to create technical drawings, 3D models and visualizations that effectively communicate design concepts to clients. Moreover my experience collaborating with student architects has sharpened my communication skills.
